

ABSTRACT

On an information record medium, there are recorded:
a plurality of content informations; and a plurality of play list sets
5 each including a plurality of play list informations defining
reproduction sequence thereof. The plurality of content
informations, whose reproduction sequences are defined by the
plurality of play list informations in a same play list set, are
different from each other in reproduction functions required for an
10 information reproduction system to reproduce the plurality of
content informations and are adapted to at least partially construct
titles, each of which is a logically united information unit and which
are same to each other. Required function information indicating
the reproduction function required for the information reproduction
15 system is further recorded for each of the plurality of play list
informations.
